ClinDataLink®

ClinDataLink® enables sponsors of clinical trials to manage physiological study data (e.g. spirometry, electrocardiogram, pulse oximetry, blood pressure, height, weight, and point-of-care laboratory data) to meet study protocol requirements. Sponsors of clinical trials have rapid online access to clinical trial data using WebCDL®.

ClinDataLink®:

- Offers outstanding data capture and management
- Uses one application for multiple protocols (minimal site foot print)
- Defines each clinical study protocol using a protocol wizard
- Exports data to a central Web server where results can be viewed online and queries can be generated (WebCDL®)
- Automates error checking and data validation
- Eliminates paper queries, faxes, and telephone logs
- Simultaneously creates a source document entry and a case report form entry, electronically
- Is compliant with 21 CFR Part 11 requirements for electronic records
